ABSTRACTION

This study aims to determine the relationship between online game addiction and early adolescent moral behavior. The sample of this study is 50 students aged 11 to 15 years at MTs Mambaul Ulum Corogo Jombang. The sampling technique used was Purposive random sampling. The data collection tools used in this study are the moral behavior scale of early adolescents and the scale of online game addiction. The hypothesis test uses statistical analysis of spearman's rho correlation. Calculation using a computer through the SPSS application. The results of the calculation obtained a correlation coefficient between online game addiction and early adolescent moral behavior $\rho = -0.188$ with a value of Sig. 0.191 (sig. < 0.05) This shows that there is no relationship between online game addiction and early adolescent moral behavior. So the hypothesis in this study is rejected

Keywords: Online Game Addiction, Moral Behavior, Adolescents.
