This study aims to determine the relationship between the Free Health Program and the Level of Community Welfare in the Jogoroto Health Center Area, Jombang Regency. This type of research uses a survey research method with a correlational research type to determine whether or not there is a correlation between variables or to make predictions based on the correlation between variables using a quantitative approach. This study used a sample of 100 respondents. With sampling using the Simple Random Sampling probability sampling technique. The test tool used was a questionnaire research instrument test. From the results of this test, it can be concluded that the Free Health Program includes various types of services, including routine health checks and health insurance programs for the underprivileged. This program aims to improve access and quality of health services for the entire community, regardless of BPJS Kesehatan membership status and there is a very strong significant relationship between the free health program and the level of community welfare in the Jogoroto Health Center area, Jogoroto District, Jombang Regency.

Keywords: Health, BPJS, Welfare
