ABSTRAKS

Self-adjustment is a process when the individual tries to meet the needs within himself that is done continuously to get a more appropriate relationship between himself and his environment . Subjects in this study amounted to 62 adolescents aged 17-24 years in the city of Jombang . Data retrieval technique is done online with google form using purposive random sampling technique. Data analysis used in this study is the correlation of Product Moment . Based on the hypothesis test results obtained correlation coefficient $r_{xy} = 0.823$ with significant $0,000 (p < 0,01)$. This shows that there is a very significant positive correlation between emotional maturity and self-adjustment.

Keywords: Emotional maturity, Self-adjustment
